

$$a = 12$$

$$b = 8$$

$$a \text{ div} = 1, 2, 3, \underline{4}, 6, 12 \quad b \text{ div} = 1, 2, \underline{4}, 8$$

$$\gcd(a, b) = 4$$

$$a = 11, \quad b = 17 \quad \text{both prime} \quad \gcd = 1$$

if a, b have $\gcd(a, b) = 1$ then a and b are coprime

$$a = \text{prime}$$

$$b \geq a$$

because it could be a bigger prime but it could also be a multiple of the prime

$$x - 3 \equiv 4 \pmod{17}$$

$$x = \frac{4 \pmod{17}}{3}$$
